Academic Project

DECLARATION

I, **Chetan Yadav**, bearing Registration Number **26BCE11059**, hereby declare that the project titled “**Movie Ticket Booking System**” has been developed by me as part of the course **Introduction to Problem Solving and Programming** at **VIT Bhopal University**.

I declare that this project is my own work and has been developed for academic purposes. The project demonstrates the application of programming concepts such as functions, conditional statements, loops, dictionaries, lists, file handling, and user input in Python.

Name: Chetan Yadav

University: VIT Bhopal University

ACKNOWLEDGEMENT

I would like to express my sincere gratitude to **VIT Bhopal University** and the faculty of **Introduction to Problem Solving and Programming** for providing me with the opportunity to develop this project.

I am thankful to my faculty for their guidance and support throughout the development of the **Movie Ticket Booking System**. This project helped me understand and apply fundamental Python programming concepts in a practical way.

I would also like to thank everyone who provided support and encouragement during the completion of this project.

Chetan Yadav

INTRODUCTION

The **Movie Ticket Booking System** is a Python-based console application designed to simplify the process of viewing movies, checking seat availability, booking tickets, calculating ticket prices, and cancelling bookings.

The system contains multiple movies with different show timings and Silver and Gold seat prices. It provides a 5×6 seating arrangement, where users can select available seats while preventing already-booked seats from being selected.

The system also calculates the total ticket amount by considering the number of Silver and Gold seats, applicable discounts, and 5% GST. A 10% discount can be applied for bulk bookings or through the CINEMA10 coupon code.

Bookings are assigned unique booking IDs and are stored in a **bookings.txt** file so that previous booking information can be loaded when the program starts.

Overall, this project demonstrates how basic programming concepts can be combined to create a functional real-world application for managing movie ticket bookings.
